PENNSYLVANIA CHAMBER

INNOVATION STATIONS

Deloitte
HealthPrism

Interactive demonstration showing how multi-sourced, curated data can transform into actionable insights across food insecurity, risk for chronic conditions, housing affordability, healthcare access deserts, child welfare, Veteran health and well-being, targeted outreach, and more.

Deloitte
Interlink

A configurable geospatial intelligence and AI platform that unifies client, public, and third-party data into a single trusted layer. Pre-built use cases deploy in weeks, not months—each packaged with validated AI/ML models, agents, data artifacts, and decision-ready outputs. Business users query data directly in plain language, and the platform runs on the client's own cloud under their own governance.

Deloitte
Deloitte AI Concierge

Deloitte built AI Concierge with Avatar, Voice, and Text based UI/UX to provide a natural language self-service experience. It offers a Q&A workflow as well as a transactional workflow for users. The Agent is always “on” to interact with users in multiple languages, and conversations maintain context and history. Off-topic security guardrails, and a human escalation path, are built in for safety and a seamless experience.

Deloitte
Zora AI

Zora AI digital workers are built specifically for enterprise-grade execution, ready to deploy without rebuilding your stack. Zora AI is your new digital workforce platform, built on NVIDIA AI to simplify enterprise operations, boost productivity and efficiency, and drive more confident decisions to unlock business value.

Deloitte
Career Orchestrator

Career Orchestrator is a public-facing, AI-enabled career navigation platform that turns uncertainty into a clear, personalized plan, helping students as well as job seekers, confidently choose pathways that lead to real, in-demand opportunities. Built as an intelligent, unified, end-to-end college and career navigation solution, Career Orchestrator brings transparency to job market demand and smartly suggests education outlets to help students and working adults understand how to build the right skills the market needs.

Deloitte
Pallium Recommender Engine

Deloitte's AI-powered platform for healthcare fraud detection, investigation, and administrative action. Built specifically to close a gap that exists in every major healthcare fraud fighting program today: the gap between identifying potential fraud and taking action on it.

Deloitte
Orbit to Action

When something changes on the ground, whether a flood, a failing riverbank, or a shifting land use pattern, agencies need to know where to look first. This demo shows how satellite data and AI flag the areas with the most change, helping state teams prioritize across emergency response, transportation, agriculture, environment, and utilities.

Anthropic
Claude at Work in Pennsylvania

Claude is Anthropic's AI assistant for organizations. It drafts and analyzes documents, works with your data, and shows its work. Stop by and watch Claude take on a real task. In a few minutes we will use Claude Cowork to research a process, build a working draft, and turn sample data into a simple dashboard, explaining each step as it runs.

BOX

Box is an intelligent content management platform that helps government agencies securely manage documents throughout their lifecycle. Learn how agencies can use Box to organize records, streamline document intake and approvals, collaborate with staff and partners, and make information easier to find- while connecting content to the applications they already use. This helps reduce manual work and gives employees more time to focus on serving constituents.

GuideWise

GuideWise: Provides organizations with visibility into their AI agent ecosystem by identifying, monitoring, and managing AI-driven workflows across the business. The solution helps teams track progress toward strategic objectives, measure technology effectiveness, identify operational gaps, and understand user adoption to ensure AI investments deliver measurable business outcomes.

LocalDutch

This demo shows a food infrastructure system, combining predictive demand intelligence, purpose-built facilities, and efficient logistics to create a scalable, predictable, resilient, and more profitable food business.

SnowFlake
Constituent 360

See how Pennsylvania agencies can securely share constituent data across departments within Snowflake. In this live demo, each agency keeps control of its data through federated access, and AI agents turn the combined, governed data into plain-language answers for caseworkers and policymakers.

WellSpan Health
Healthcare AI Voice Agent

Meet **Ana**, WellSpan Health’s AI-powered voice agent that's transforming the patient follow-up experience. In this live, interactive demonstration, you'll step into the shoes of a recently discharged emergency department patient and receive a call from Ana. Interact with Ana as she assesses symptoms, confirms medications and next steps, answers questions, and proactively flags concerns for human clinical follow-up, showcasing how AI helps deliver smarter, more connected care at scale.
